Festoon Lights 24v 10m 20 Bulbs (LVFEST-20-*)

FOR INDOOR AND OUTDOOR USE

Batch Number: XDZD36502025

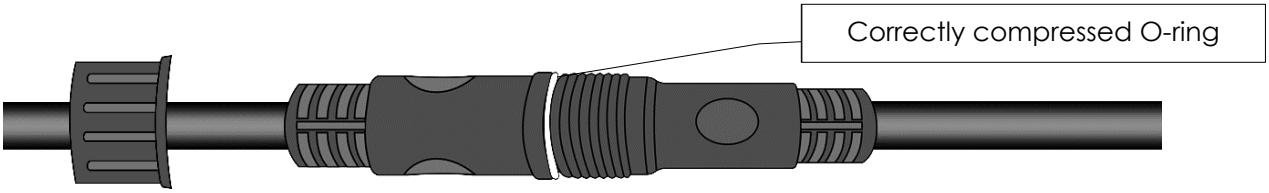
These low voltage LED festoon lights are available in Warm White, Ice White, clear and Multicoloured on black or white cable. You will receive the light sections and plug separately which you need to connect together. Each string is 10m long with 20 bulbs which you connect together to create your required length.

Connection Instructions

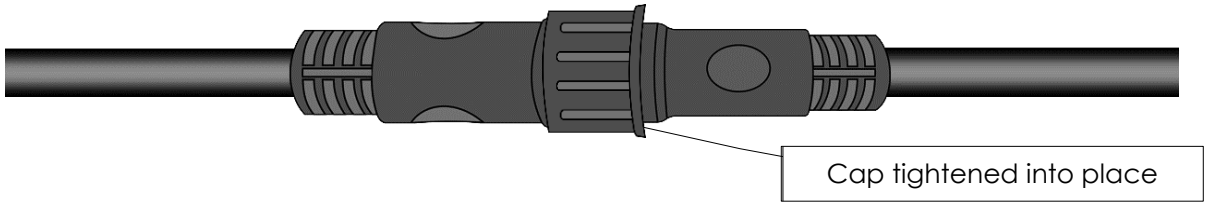
This is a modular, interconnectable lighting system, designed for indoor and outdoor use. The light set is IP44 rated.

IMPORTANT NOTE: - **You can connect up to 50m (100 bulbs) from one**

1. If your plug is not connected to a set of lights, connect the transformer plug to the first string of lights by pushing the male/female connectors together.
2. When connecting power cords, lights or accessories, it's important to make a good seal to ensure a waterproof connection. This is achieved by pushing the male and female connectors as tightly as possible ensuring that the rubber 'O-ring' is compressed to make the seal. Please note if the seal is not made correctly and water gets in your warranty will be invalid.



3. The cap can then be screwed into place. There will be a cap provided for the end of the lights, please note – this must also be screwed into place to seal the final string of lights.



4. Test the lights by plugging them in before you install them.

Timer Instructions

The supplied transformer comes with a inbuilt timer.

This UK mains plug with integrated 24v transformer allows you to programme your Festoon lights to come on for a period of 8 hours at the same time every day.

To do this, simply press the power button ONCE. The lights will now stay on for a period of 8 hours, then switch off for 16 hours, before coming back on for 8 hours to begin the cycle again at the same time the following day. When the button is green, the timer is in operation.

By pressing the button again, you can also opt for permanently on (lights on but green button off) or permanently off.

To change the time at which the lights come on, simply switch the lights off, and then switch them back to timer mode at the new time you wish them to come on.

Warnings

1. Do not connect the lights to a power source whilst they are still in the packaging.
2. The external, flexible cable or cord of this light set cannot be replaced; if the cord is damaged, the set should be safely disposed of. The lamps are not replaceable.
3. The Transformer plug must be positioned indoors or in a waterproof socket at all times.
4. Do NOT overload. Connect other lighting chains of the same type up to a maximum of 50 metres (100 bulbs) in a single run.
5. **Installing** – The Light string must be supported every 5m, preferably at the connectors if you are extending. Do not hang loose over this length as damage could be caused to the wire connections.
6. The lighting set is not a toy – please keep it away from children.

Troubleshooting

If for any reason when you first plug the lights in they do not work please try the following and if none of these resolve the issue, please contact us:

1. Is the connector pushed fully together to make a connection?
2. If you have multiple strings connected together and the lights do not seem to be working, please disconnect them all and try connecting each set on its own with the power cord to identify which string is not illuminating.

Festoon Lights Accessories Range

Blank Extension Cable (5 Metre) - Product Code: LVFEST-XTO Extension cables are available in 5 metres. Great for adding after your power cord to get from your indoor socket to where your lights start outside. These extension cables can be used anywhere in your display, either after your power cord or in between the light sets to give you extra cabling if required.	
Plug Transformer - Product Code: LVFEST-PLUG/ LVFEST-XTO If you need another plug transformer to light up your Festoon display in a different area, replace your existing plug or change to a timer option, you can purchase one online using the codes above.
