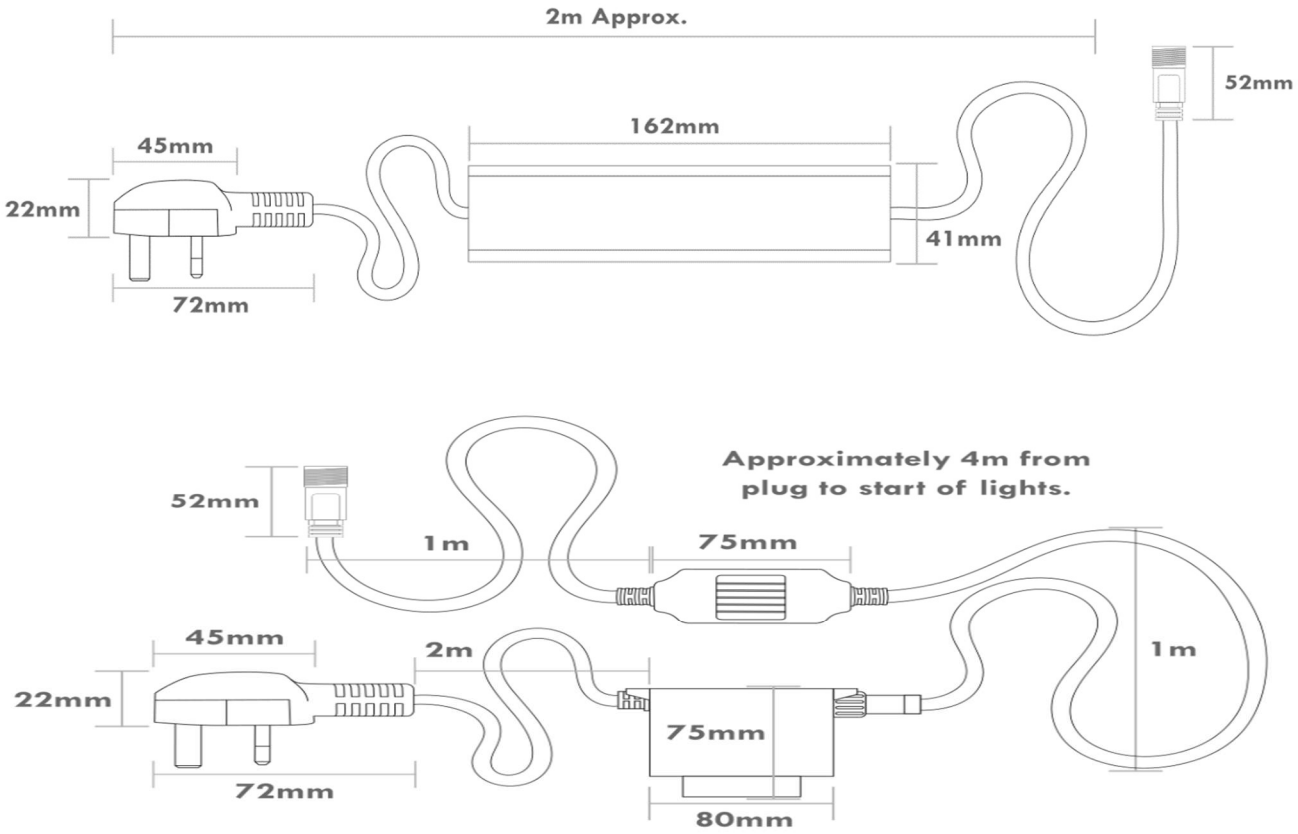
Outdoor Low voltage (24v) String lights (SLOLV65 & SLOLV Range)
FOR INDOOR AND OUTDOOR USE – Batch no: **XDZD36502025**

These low voltage LED string lights are mounted on a Black Cable and are available in Warm White, Ice White or multi coloured. This is an interconnectable light set. You will receive the light sections and power cord separately which you need to connect together. As this set is low voltage, the required transformer and rectifier will be supplied as part of the power cord. These lights will work with either of the transformers shown below with the following codes: **PCOLV60W65, PCOLV100W65, SLOLV60W2016ON & SLOLV120W:**

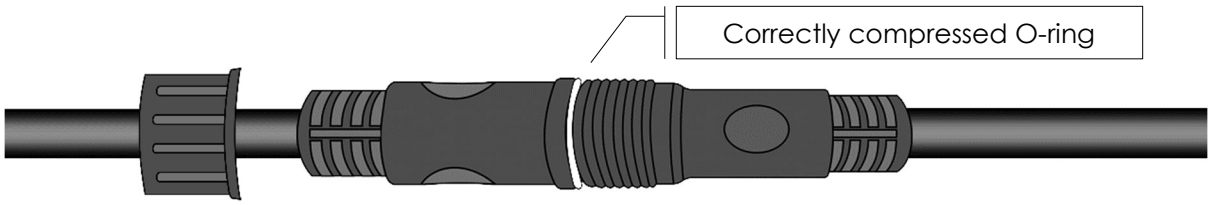


Connection Instructions

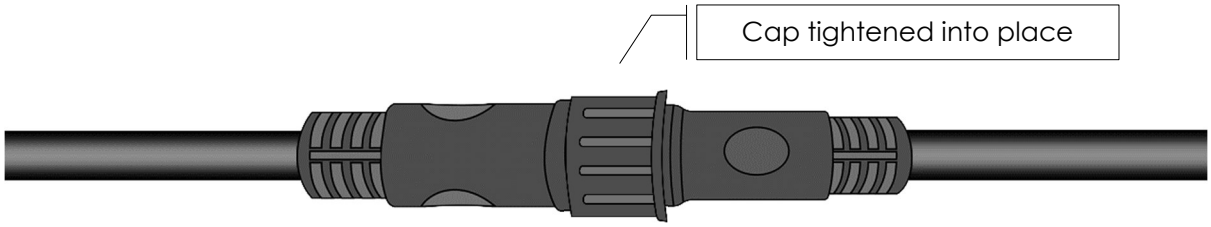
This is a modular, interconnectable lighting system, designed for outdoor use. The light set is IP65 rated.

Splitters and extensions are also compatible with these.

1. Connect the power cord to the first string of lights by pushing the male/female connectors together.
2. When connecting power cords, lights or accessories, it's important to make a good seal to ensure a waterproof connection. This is achieved by pushing the male and female connectors as tightly as possible ensuring that the rubber 'O-ring' in between the two connectors is compressed to make the seal. Please note if the seal is not made correctly and water gets in your warranty may be invalid.



3. The cap can then be screwed into place. There will be a cap provided for the end of the lights, please note – this must also be screwed into place to seal the final string of lights.



4. Test the lights by plugging them in before you install them.
5. **Please note that the shrink wraps provided are for tamper proofing only and are not required to make a waterproof seal.**
6. The lights can be plugged in and used as one simple 10m section or extended up to a maximum of 300m, with the appropriate sized transformer (see Warnings point 4 below).

Warnings

1. Do not connect the lights to a power source whilst they are still in the packaging.
2. The external, flexible cable or cord of this light set cannot be replaced; if the cord is damaged, the set should be safely disposed of. The lamps are not replaceable.
3. **Do NOT overload. Connect other lighting chains of the same type (Xmas Direct only) up to a maximum of 100m (60w transformer), 150m (100w transformer) 230m (150w transformer) or 300m (200w transformer) OR with the 100m (SLOLV60W2016ON transformer) 2 x 100m with supplied splitter (SLOLV120W transformer).**
4. The lighting set is not a toy – please keep it away from children.

Troubleshooting

If for any reason when you first plug the lights in they do not work please try the following and if none of these resolve the issue, please contact us:

1. Is the connector pushed fully together to make a connection?
2. If you have multiple strings connected together and the lights do not seem to be working, please disconnect them all and try connecting each set on its own with the power cord to identify which string is not illuminating.
3. If you have connected your set together, but it fails to light, it may be a polarity issue. Very occasionally the guide notch on the connectors can be placed upside down during manufacturing. You can work around this by simply disconnecting, rotating one connector 180 degrees, and pushing the connectors together - irrespective of the guide notch's position. You may find some resistance but this is normal. **This will not affect the operation of your lights.**
