Multi Socket Cable – Pro Series

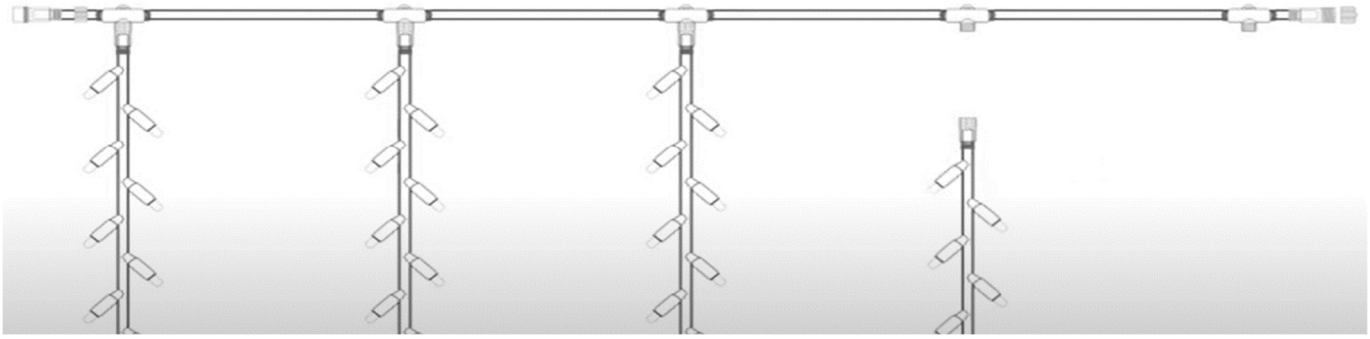
FOR INDOOR AND OUTDOOR USE - **XDZD36502025**

Information

These 2m width top cables work with pro series static or sparkling strings, and come in green or white cable. You will receive the cable only, you can connect up to a maximum of 2000 LED bulbs from one plug.

Connection Instructions

1. Connect the male end of the lights, to the connector on the top cable. By pushing the male/female connectors together.
2. When connecting power cords, lights or accessories, it's important to make a good seal to ensure a firm connection. This is achieved by pushing the male and female connectors as tightly as possible
3. The cap can then be screwed into place. There will be a cap provided for the end of the lights, which should be screwed into place to seal the bottom of the string.
4. Connect the power cord to the top cable, again making sure you make a good seal.



Warnings

1. Do not connect the lights to a power source whilst they are still in the packaging.
2. The external, flexible cable or cord of this light set cannot be replaced; if the cord is damaged, the set should be safely disposed of.
3. The lamps are not replaceable
4. Do NOT overload. Connect other lighting chains of the same type (Xmas Direct only) up to a maximum of 2000 LED bulbs in a single run for static and sparkling.
5. The lighting set is not a toy – please keep it away from children.
6. Make sure all sockets are connected to lights.

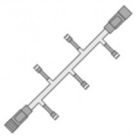
Troubleshooting

If for any reason when you first plug the lights in they do not work please try the following and if none of these resolve the issue, please contact us:

1. Is the connector pushed fully together to make a connection?
2. If you have multiple strings connected together and the lights do not seem to be working, please disconnect them all and try connecting each set on its own with the power cord to identify which string is not illuminating.
3. If you have connected your set together, but it fails to light, it may be a polarity issue. Very occasionally the guide notch on the connectors can be placed upside down during manufacturing. You can work around this by simply disconnecting, rotating one connector 180 degrees, and pushing the connectors together - irrespective of the guide notch's position. You may find some resistance but this is normal. **This will not affect the operation of your lights.**

Static and Sparkling Strings, (SLO, SLI,)

Pro series lights work with this top cable. You can purchase indoor or outdoor lights, and are available 5 or 10 meters in green or white cable. They also come in a variety of styles and bulb colours.



Power Cord

Power cords are available in 2 meter length in black or white cable. This will power both static and sparkling effect lights.

Extension Cables (available in 5 metre XTO5GC/WC or 10 metre XTO10GC/WC)

Extension cables are available in 5 or 10 metres in green and white cable. Great for adding after your power cord if you need extra cabling to run from your power socket to where you'd like the lights to start. These extension cables can be used anywhere in your display, either after your power cord or in between the light sets to give you extra cabling if required.
